

## 1-2 Accumulator Spring

Part No.

**77704S**

NOTE: Standard quantity 5/bag

### GM 200-4R, 4L60, 4L60-E, 4L65-E, 4L70-E

Sonnax performance-rated 1-2 accumulator spring **77704S** provides firmer shifts for the enthusiast that appreciates quick, positive shift feel in GM 4L60-series units. The spring design provides performance shift feel, but does not reduce accumulator piston travel. This allows for a firmer - but still cushioned - shift that minimizes shock to the band and shafts.

The Sonnax spring achieves the same effect as the common shop practice of replacing the stock 1-2 accumulator spring with the THM 350 direct accumulator piston spring. The Sonnax spring also may be used as a replacement for the THM 350 direct accumulator piston spring.

#### Installation

Remove the OE 1-2 accumulator spring and replace with Sonnax spring.

**NOTE:** In '94-later units, install with the spring against the separator plate as shown, or a softer-than-OE shift can result.
