

PRODUCT UPDATE

Subaru has made changes to its valve body solenoids. The TCC and AWD solenoids now feature the same black-coloured stem, making visual identification more difficult.

The TCC solenoid retains the same resistance Specification of 10–13.5 ohms.

The latest OE-spec solenoid can be retrofitted to earlier models originally fitted with the brown-stem solenoid.

Important: It is the rebuilder's responsibility to check the resistance of any replacement solenoid to ensure the correct replacement part is being fitted to the correct position on the valve body.

TCC Solenoid

10 - 13.5 Ω

AWD Solenoid

3.2 - 3.5 Ω
